**Building Series:** TITAN®, Legend®

“We will benefit from the animals whose gratitude for the shelter will be expressed in yield increase and herd longevity.”

Blagodatenskaja

## Russia's Climate No Match for Cover-All

Finding the right building to house dairy cattle can often be overwhelming. Especially when you need a building that can withstand Russia's unpredictable climate. Dairy farmers will agree that it is critical to their operations to keep their dairy cows healthy, safe and dry in the worst kinds of weather. Dairy cows also require natural light to maintain their milk production. When Blagodatenskaja decided to purchase dairy buildings, they chose Cover-All's because the buildings create a comfortable atmosphere for the cows that is conducive to increasing milk production.

EuroAgro, the authorized Cover-All dealer in Russia, worked through downpours and driving winds to complete the construction of the five Cover-All TITAN® buildings and Legend® breezeway. Though constrained by the muddy ground, the Cover-All installation crew was able to complete the buildings in forty days. Blagodatenskaja was impressed by the simplicity and logic of the Cover-All buildings and the installation process. “If you assembled Lego® in your childhood – then assembling Cover-All buildings will remind you about that pleasant time,” Blagodatenskaja jests.

There are numerous features that the company enjoys the most about their Cover-All buildings. One feature is the quick

and easy construction, which was evidenced in the forty day installation that continued through poor weather conditions. The abundance of light and the superior ventilation system created a natural living environment for their animals, which was another benefit Blagodatenskaja liked. Dairy cows are easily spooked by dark shadows, which can disrupt their milk production. The Cover-All DuraWeave cover allows light to fill the entire building, eliminating shadows and reducing herd stress. The company found the Cover-All building's materials to be high quality, with excellent strength and durability. Blagodatenskaja says, “We will benefit from the animals whose gratitude for the shelter will be expressed in yield increase and herd longevity.”

Blagodatenskaja feels that they chose the right company for the job and found that EuroAgro Russia was a reliable partner in this project. “Trust in our Cover-All dealer meant trust in the technology and equipment that they proposed to us.” The reaction from friends and neighbors has been a resounding, “Wow!” Two additional TITANS® and four Legend®s are scheduled to be built in the near future to support Blagodatenskaja's large scale dairy breeding projects.
