

Parelli Center

Location: Pagosa Springs, Colorado

Building Series: TITAN®

Building Size: 110' wide x 160' long (33.5m x 48.7m)

Application: Riding Arena

Cover-All - The building of the future that's here today

Pat Parelli, world-renowned natural horseman, has traveled the world and has the resources to build any kind of indoor riding arena on his magnificent ranch in Pagosa Springs, Colorado. After careful consideration, Linda and Pat Parelli chose Cover-All.

The 110' wide x 160' long Cover-All® TITAN® at the Parelli Center in Colorado plays an important role in the Parelli business. Throughout the spring, summer and early fall, people from all over the world travel to the Parelli Center to learn how to experience a better relationship with their horse. The seminars are hosted by Linda and Pat Parelli along with their top students and endorsed instructors. On a typical day, two different courses may be held simultaneously in the Cover-All® TITAN® building. The Parelli Center has been accredited by the State of Colorado.

"Did I mention how great the acoustics are?" asks Pat. "It's amazing how the shape of the building and material allow the sound to be clear and crisp; communication is something that we're all about - human to horse and human to human. I've always disliked metal and wood coverings for arenas. There's nothing worse than the rain pounding on the roof during a rainstorm, especially when you're either training or trying to conduct a seminar," says Pat.

"The building is light and airy, not dark and gloomy like other arenas," adds Linda. "From a teaching perspective, the acoustics are very good. There is no echo and our voices carry really nicely. And you don't need lights in a Cover-All unless you are going to be riding at night. They are the nicest arenas to have."

The Parelli's are also impressed with the temperature moderation aspect of their Cover-All® building. "The Cover-All is cool in the summer and warm in the winter. This ability to adapt to temperatures is really important, especially if you get great variances in seasons like we do in Colorado. It provides perfect protection from the wind, and the snow just slides off in the winter. We knew the buildings would hold up because they are made in Canada - 'snow country'."

Everyone at the Parelli Center is thrilled with the benefits the Cover-All® building is providing to their programs. "This is what I call 'my office', so when it came to finding a special place for my special horses, I could not think of a better product than Cover-All," says Pat. "It serves every purpose and everything that is congruent with my passion."

Parelli International Savvy Center - 110' w (33.5m) x 160' l (48.7m) Cover-All TITAN®.

The Cover-All building seats up to 2500 people during an ISC conference.

Linda Parelli - human to horse and human to human communication.

The acoustical qualities of the Cover-All allows for clear, crisp communication.
